

# MicroPress

## Complete, scalable production colour workflow solution.

### Introduction

Produce complex documents faster and more efficiently with MicroPress's intuitive graphic user interface, industry-leading architecture, late-stage editing tools, workflow automation and features that boost productivity during crunch times. Our fast, high performance, raster-based digital document production system produces complex short-run, colour and black and white documents on the latest PDF and PDF/X-4 file formats, and you can take advantage of new OS capabilities like Microsoft XPS as well.

### Benefits

MicroPress Solo, Plus and Max servers' make-ready tools maximise productivity, optimise job throughput, produce unmatched quality and the flexible, scalable design allows RIPs and software to be added easily.

MicroPress' TrueColor Image Editing adjusts colours fast with its intuitive on-screen feedback. MicroPress' TrueEdit is the best application for anyone needing to edit and manage multiple jobs such as job merge or scanned (analog) file insertion, especially anyone in the corporate or print for pay markets. Gammatic calibrates single, multiple and clustered devices to a universal standard while ConTune ensures documents printed across multiple engines appear identical.

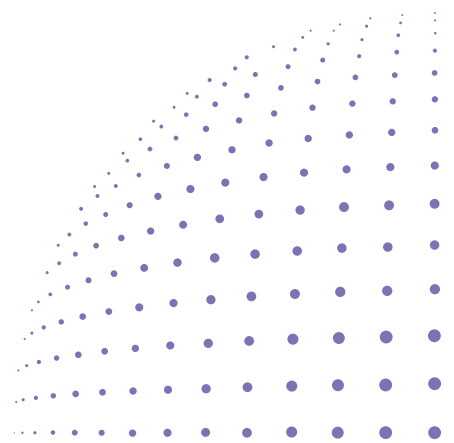

ICC Color Set Up produces accurate and consistent colour, giving users complete control by letting them select ICC profiles and rendering intent per image type. Its ICC Profile Processor automatically recognises RGB, CMYK, LAB and spot colours, intelligently mapping them to the correct CMYK values for each print engine. Seamlessly integrating PANTONE® libraries, combined with EFITM Spot On with Substitute Colors, you achieve perfect business print with accurate corporate colours every time.

MicroPress True Curves makes universal curve creation quick and easy with mouse-drag functionality and anchor points for sophisticated fine-tuning. It also offers multiple proofing emulations per printer, allowing a single engine to produce various proofing emulations by selecting printer queues with different colour setups.

# MicroPress

## FEATURES

### Edit

- Merges electronic documents from many formats
- Seamlessly incorporates scanned material
- Image editing
- Makes tab creation easy
- Imposition
- Header, footer, numbering (Bates Stamp Capability)
- Center pages/margin offset
- Colour and black and white splitting

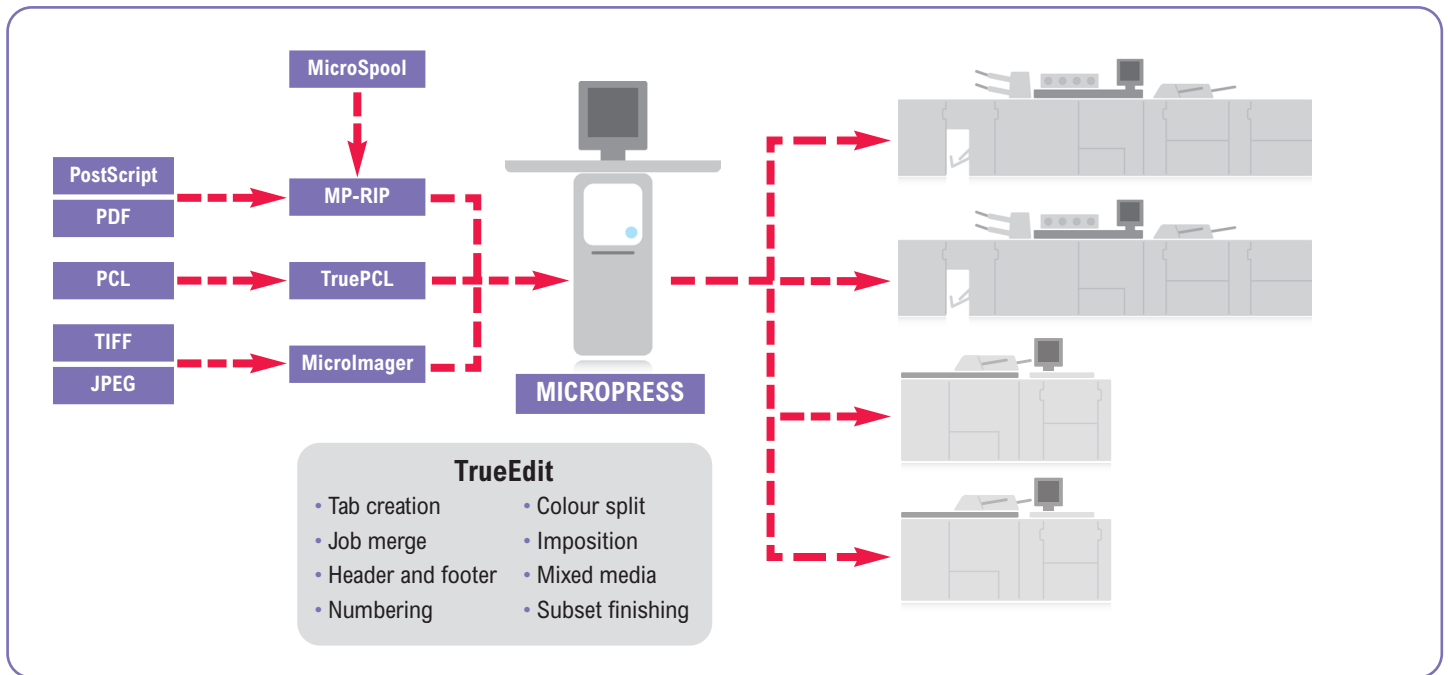

### Colour management

- ICC Colour Setup
- Create curve
- Colour editing
- Spot colour libraries

### Production

- Managing multiple devices
- Supports engine grouping for faster run rates
- Booklet creation
- Job management
- Archiving
